

Mercury Paper, Inc.

SCI provided structural engineering services as the Structural Engineer of Record for the project. In addition to structural design for the building shell, SCI provided structural engineering design services for multiple crane runways and auxiliary building additions.

The building is used as a paper processing plant, where bulk paper rolls are brought in and processed into tissues, napkins, and other paper products. The building is divided to contain receiving and raw product storage, processing, finished product storage and shipping, and management offices.
